

Neat and Tidy! An Organization Game

This game was created by Melanie Sandoval, Silvana Velazquez, and Paris Sithavong.

Description

“Neat and Tidy!” is a mindless and easy-going game created to echo the cozy and nostalgic gameplay of early 2000’s games. The storyline being that the user has moved into a new home and must organize one more thing: a bookshelf. Upon starting the game, the bookshelf will present an assortment of items that must be drag-and-dropped by the player to the correct place.

Controls

The game functions on the user’s ability to click and hold the sprites to its assigned spot.

Checklist

- Set positions for each sprite
- Sprite returns to randomized starting position if it is not in the correct position

Known Bugs

- Overlapping objects
- Dragging problem
- Setting random positions

Key Features

- Snap back function
- Sprite tracker for how many items are left
- Quirky hints throughout the stage for the user to find
- Satisfying snap noise and entertaining background music

How it was Built

- Built in Snap!, built with basic and customized blocks
- Set coordinates to each item position
- Used “touching?”, “if else”, “repeat until”, and “forever” blocks to have the game working
- Set random positions to start the game

How to Play

- Click the green flag
- Click “Play” button

- Drag and drop each items in the right position
- (Click the dinosaur for hints)
- When everything is sorted on the bookshelf, the player wins

Future Improvements

- Have different difficulty levels
- Add timer
- Add different backgrounds and items
